THREE EASY STEPS To the perfect fit.

Here's how you can find the perfect fit with the ASC concept for every customer quickly and easily:

1. ANALYZE

There are five different analysis devices to choose from that determine the foot type, length, width and other data concerning customer's feet. From the three-dimensional representation of both feet using the 3D Scanner VANDRA to the quick and easy-to-use Feet View, we offer the following devices for foot type analysis: 3D Scanner VANDRA, Podoscope, Feet View, FMD (Foot Measuring Device), Measuring Gauge Brannock (length and width measurement).

2. SELECT

Once the foot type has been determined, it is easy to find the appropriate insole, suitable Power Fit socks, and foam liners. Choose the product that is going to meet the customer's requirements for their sport or activity, whether it's skiing, snowboarding, hiking, running or working, and so on.

3. CUSTOMIZE

Regardless of whether they're Step-In, Fusion or 3D Custom, all insoles can be custom molded and fitted precisely to the foot of a customer through heating.

BOOTDOC offers a variety of tools for customizing insoles: Heating: 3D Heater, Speed Heat Digital 3L, Heat Gun Fitting: AUTOFIT BT, VAC IV Electric, Pillows 13, CMT-System

3-ARCH CONCEP THE FAST SOLUTION.

You can cover all activities choosing from four models and three different constructions, regardless of various foot types. Follow the simple foot analysis steps and select an insole from the four models in LOW, MID or HIGH Arch. Integrate the insole into the footwear by trimming and you're finished! Individual fitting can be offered as an extra service that ensures customers get a fit that is 100 % perfect. The wide range of insoles guarantees the right insole for every foot type.

LOW ARCH

The arch is incapable of cushioning, thus reducing the spring in the customers step or running motion. Displacement of the bones involved (e.g., buckling of the ankle bone, heel bone) can cause strain on tendons and ligaments. This leads to static imbalance and pain. The LOW Arch insole helps to prevent overpronation.

MID ARCH

The layout of the bones, tendons and ligaments reflects the theoretical norm. The pressure below the foot is distributed over the 3 main support points: heel (20 %), big toe base joint (17 %), small toe base joint (13 %). A MID Arch insole offers optimum pressure distribution for this type of foot, while stabilizing and cushioning.

HIGH ARCH

The long-arch is too high, thus reducing the contact surface. High medial and lateral arches are typically caused by shortening of the tendon structure or high muscle tension. These changes of the foot shape cause friction and pressure points when wearing shoes. A stressed tendon structure is often found throughout the body in this case. A HIGH Arch insole ensures comfortable, even pressure distribution for this foot type.

Following models are available in the 3-Arch Concept:

110

FITTING

∇ CE (5 PACK)

01-0400-183-x | Size: XS - XXL

The premium model for maximum performance.

- · Perfect support and maximum transmission of energy thanks to a perforated PE Top-Grip surface (1.6 mm)
- Excellent precision thanks to the layer being extra thin
- External stabilizers

Insole can also be reordered in pairs in sizes XS and XXL.

Pack

(5 PACK) DE 01-0400-185-x | Size: XS - XXL

The comfort model for extra wide feet and ski boot lasts.

- Maximum comfort thanks to a 2.0 mm PE cushioning layer
- Maximum stability thanks to an integrated mid and rear foot stabilizer (1.0 mm)
- For extra wide feet and lasts
- Slide zone in the arch area, which makes the boot easier to put on

Insole can also be reordered in pairs in sizes XS and XXL.

HEEL PERFORMANCE

01-2200-040 | Size: uni

 Stabilizes 3D CUSTOM insoles in the mid and rear foot area

HEEL COMFORT 01-2200-041 | Size: uni

 Stabilizes 3D CUSTOM insoles in the mid and rear foot area

🕎 = Performance, 🚺 = Improve, 🌔 = Basic

3D POWER (5 PACK)

For ambitious customers who are looking for maximum stability.

- Perfect support thanks to a perforated PE Top-Grip surface (2.0 mm)
- · Year round performance thanks to a Flex-Cambrelle base layer
- 1.0 mm mid and rear foot stabilizer offer maximum power, flexible in forefoot
- \cdot Excellent insole for low volume, performance fit

Insole can also be reordered in pairs in sizes XS and XXL.

3D CLASSIC (5 PACK)

01-0400-189-x | Size: XS - XXL

The basic all-purpose model for wintersports.

- Optimal support thanks to a perforated PE Top (1.6 mm)
- Maximum stability thanks to an integrated mid and rear foot stabilizer (1.0 mm)
- Slide-in zone in the arch area, which makes the boot easier to put on

Insole can also be reordered in pairs in sizes XS and XXL.

ACCESSORIES

HEEL CUP SOFT

01-2200-031-x | Size: XS - S 01-2200-032-x | Size: M - L 01-2200-034-x | Size: XL - XXL

- Stabilizer for insoles
- Self-adhesive tape included

HEEL CUP STIFF

01-2200-035-x | Size: XS - S 01-2200-036-x | Size: M - L 01-2200-037-x | Size: XL - XXL

Stabilizer for insoles
Self-adhesive tape included

Material is pushed back to the rear part of the pillows to form a plateau. Next, air is pulled out to create a vacuum.

The customer should sit in a 90-90-90 position with the legs hip-width apart and put the feet on the vacuum pillows. The VAC IV offers the possibility to adjust the width of the molding pillows! Then, enough air to enable one of the feet to be copied needs to be let into the cushion.

1

2

3

4

5

6

7

The customer should apply no pressure to their foot at all, so that it can be positioned and copied correctly.

The heel should be pressed by the technician into the vacuum pillow while in a neutral position, and the area from the midfoot to the toes should then be carefully embedded in the pillow. Pull out more air to harden the cast.

Smooth out the pillow in front of and around the toes, so that an insole can be placed in the best possible position in the forefoot and toe area.

Heat the 3D Heater to the desired temperature, insert the insoles, and activate the timer. Avoid heating the insole too much and for too long as this will have a negative effect on the materials and the cooling time!

Position the heated insoles in the vacuum pillow starting from the heel and working toward the toes. Be sure to align the insole properly.

VIDEO

Ask the customer to stand on the insoles and put all their body weight on them for five minutes. Ensure the customer is standing with the feet hip-width apart when doing this. Allow the insoles to cool down for a further five minutes so that they harden completely. Once the 3D insoles have cooled completely, you can remove them from the 3D VAC and finish them (by sanding, cutting and/or milling them).

POWER FIT

ANALYSIS

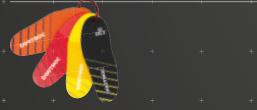

Layer-ḃy-layer, create your own 3D design to suit your exact needs, and personalize it with your own logo! Insole technology made-to-measure!

Certified Pedorthist, owner Park City Ski Boo

"Professional ski boot fitters know that the insole is the deciding factor in the perfect fit, and that the best results not only depend on knowledge and experience, but also on the quality of the selected materials. It's really satisfying to work with materials that provide excellent foot mapping. BOOTDQC insole blanks have been created according to my own specifications, which means that I can adhere to and control important criteria such as detailed foot mapping and deep contours. This provides the customer with the *best possible support and comfort."

Marcel Hagleitner, Sportshop Hagleitner, Saalbach

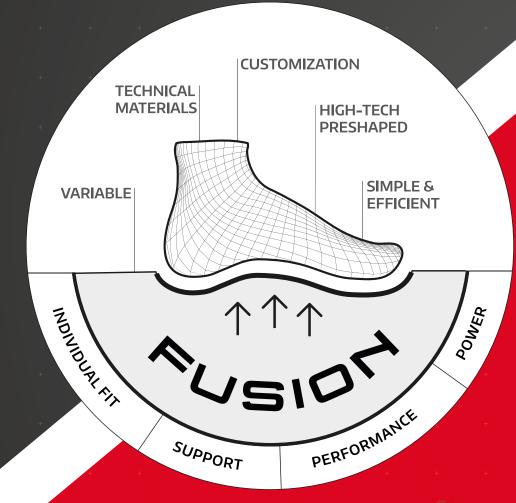

"The bespoke shape of the insole is the most important thing for me. There's absolutely no question that the insole has to be a perfect fit in order to provide the best possible support and comfort. We are so impressed with the quality of BOOTDOC insoles that we have put our own company logo on them, which shows just how high the quality of the product is and how important proper boot fitting is to us."

PERFORMANCE

More performance, better support, and as a pleasant side effect, warmer feet that feel refreshed. BOOTDOC Power Fit Socks with graduated compression and arch-type support stand out from rivals because of their high-quality workmanship and maximum comfort.

Arch-Type support

The Power Fit Index (PFI) indicates how strong the overall level of gradual compression is: PFI 30 designates light compression, while PFI 90 is classified as strong and is therefore only found in our performance series.

CUTEC® COPPER TECHNOLOGY

CuTEC® offers a unique approach

- Copper binds to the sulfhydryl groups found on proteins. Inactive enzymes, disrupting normal metabolic processes by binding to DNA and inhibiting cell replication
- · Copper disrupts cellular respiration and binds to microbial DNA.

CuTEC[®] is an engineered fiber or fabric creating the right blend for the right concentration on the surface to maximize fabric and sock performance

CuTEC[®] is a permanent part (meaning both INSIDE and OUT, and never washes out) of the fiber or fabric

The products that contain CuTEC[®] help reduce odor, improve hygiene and enhance the look and feel of the skin creating a healthier environment for the wearer

Q.

POWER FIT SOCKS

The models in the Active range offer greater performance, optimal support, and quicker recovery. BOOTDOC Power Fit Socks with compression function, Arch-Type support, and copper yarns shine thanks to high-quality workmanship and maximum wearing comfort. The use of copper also has an odor-inhibiting and antibacterial effect.

Arch-Type support

ECONYL®

Our appetite to create new products and buy new products is infinite. The planet's resources aren't. But it's okay because we can have both: new products and a better environment. Nylon waste, otherwise polluting the Earth, is transformed into ECONYL® regenerated nylon. It's exactly the same as brand new nylon and can be recycled, recreated and remoulded again and again. That means you can create new products and buy new products without having to use new resources.

HOTRONIC

The XLP P series from HOTRONIC is setting new standards in foot heating systems. The special lithiumiontechnology, combined with state-of-the-art electronics, makes the batteries very compact and light. The batteries are barely noticeable and can be controlled either directly or with Bluetooth via the HOTRONIC Heat app.

The constant heat level control ensures a regular temperature throughout use.

MOTRONIC HEAT APP

- The five heat settings with additional Power Boost level can be conveniently controlled on a smartphone using the Heat app via Bluetooth
- +•Stand±by mode
- $\cdot\,$ Battery storage mode for summer storage
- \cdot The app provides an overview of the current battery
- charge level and the heat settings.
- The HOTRONIC Heat app is available for free in the App Store and Google Play Store.

NEW Works with **Bluetooth** Available on the **App Store** Get it on Google Play SURROUND ECHNOLOGY

NEW

BATTERY PACKS

Three models to choose from. The Bluetooth versions can also be controlled with the HOTRONIC Heat app: XLP 2P BT: 4400 mAh, XLP 1P BT: 2200 mAh, XLP 1P: 2200 mAh

RECHARGING

The newly developed charging plug including reverse polarity protection for all XLP P models has a USB-A connection, exchangeable 230 V EU, and additional 110 V US power plug. Input: 100 – 240 V, output: 5 V / 2.1 A

NEW

FITTING PERFORMANCE

Two basic versions of the Heat Socks with compression are available to choose from:

COMFORT: The material composition and design provide a comfortable fitting sock.

THIN: The thin version is available to customers who want their Heat Socks to take up the minimum possible space inside their footwear. Once again, the compression offers optimum wearing comfort and shoe fit.

HEAT ELEMENT SURROUND

- Surround heating element in the outer layer for greater comfort and better heat transmission.
- \cdot The battery packs are simply
- attached to the inner cuffs of the Heat Socks using snap fasteners.Five levels of heating power are
- available and are set on the battery pack itself, including a Power Boost setting for a short boost of extra
- heat (approx. 3 minutes).

HEAT ELEMENT CLASSIC

- Classic heating element
- The battery packs are simply attached to the inner cuffs of the Heat Socks using snap fasteners.
- Five levels of heating power are available and are set on the battery pack itself, including a Power Boost setting for a short boost of extra heat (approx. 3 minutes).

RYER

MICRO 01-0100-5205 | 110-230 V | 12 V

HOTRONIC

Compact electric shoe and boot dryer.

We're all familiar with that unpleasant feeling of walking around in cold, wet shoes. Thanks to the MICRO DRY, this is now a thing of the past! The handy shoe and boot dryer for the home and on the go dries ski and snowboard boots, winter boots, casual footwear, sneakers, and work boots gently and efficiently. Gentle drying means that the material is not damaged or even deformed. With its compact dimensions, this lightweight drying device can be placed in the smallest bag and can be conveniently taken anywhere.

The MICRO DRY is extremely flexible. You can use it at home or in a hotel, when you're out for a day of winter sports, or on the way to work: simply plug it in to the 12 V outlet in your car and preheat your shoes.

- · Gentle drying temperature and airflow to ensure a longer lifetime for your shoes and boots
- Optimum heat circulation
- Protection against overheating (max. 70 °C)
- Includes 230 V plug, 110 V plug and 12 V car adapter
- 6 watts

BOOT, GLOVE AND HELMET DRYER **HOTRONIC**[®]

TECH DR

01-0100-5206 | 110 V 01-0100-5207 | 230 V

Electric dryer for shoes, boots, gloves, and helmets.

Using warm air, TECH DRY dries wet shoes, boots, ski boots, and gloves, as well as motorbike, bicycle, and horse-riding helmets, in a short time and without damaging the material. Even leather boots and shoes can be dried thoroughly and with care. As soon as the footwear or helmet is pulled over the drying attachment, the program starts automatically and warm air is circulated throughout the footwear or helmet.

In the winter months, the TECH DRY is indispensable for all those who like to be outdoors whatever the weather, and it can also be used for preheating.

- Time and temperature setting up to 360 minutes
- Temperature scale up to 60 °C
- · Automatic start/stop operation when items are placed on, or removed, from machine
- Digital display
- Overheat protection switch-off for greater safety
- Quiet operation
- Removable attachment for shoes, boots, or helmets
- Scope of delivery: 230 V plug
- 300 watts
- Attachment for shoes, boots, gloves; 2 x attachment for helmets

ANALYSIS & FITTING

Professional fitting is based on analysis of the foot. From the three-dimensional representation of both feet using the BOOTDOC 3D Scanner VANDRA to its easy-to-use Feet View, BOOTDOC offers several devices that revolve around this. Because each BOOTDOC insole can be heated and custom molded and BOOTDOC has designed specific heating devices for each category of insole and customization. Depending on the style of insole, and experience of the shop, the BOOTDOC insoles can be customized by using a specialty VAC system, Autofit BT or molding pillows.

30 SCANNER VANDRA SIMPLE. FAST. 30.

3D SCANNING IN A NEW DIMENSION

The new BOOTDOC Scanner Vandra, developed in cooperation with the Swedish technology start up Volumental, sets new standards in 3D visualization of feet.

THE TECHNOLOGY

Thanks to the latest technology of 4 depth com-⁺ pensation cameras both feet are measured and 3D rendered within a few seconds. The visualized 3D picture is of the highest precision and can be analy-⁺ zed from various angles: ⁺ ⁺ ⁺

THE ANALYSIS

 Just step on the-3D Scanner without any other
 device. No changing of socks or special equipment is required. This guarantees efficiency, high comfort,
 and no hygiene hassle during the analysis process.

+ INFORMATION DATA

The 3D Scanner Vandra offers vast information about, and eleven measurements of, the foot. The result is visualized in the split-screen app on the tablet. The left side shows the 3D rendered foot which can be looked at from all angles with zoom in / out function. The right side allows you to scroll up or down to view all the measurement data.

 Length and width of both feet as well as size recommendation in US, UK, EU, MP with manual correction option

- Visualization of the foot type LOW/ MID / HIGH arch.
 Zoom in / out function on the 3D model
- · Instep length as well as width and yolume
- Measurement information can be e-mailed to clients

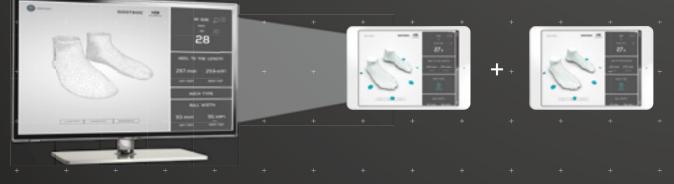

THE DATA

The result of the analysis is a vast number of information and measurements around the foot. The Vandra can not only provide length and width but also arch type, instep height, volume recommendation and other useful information ito allow for the best customer service. The data is anonymously stored in an online cloud and is being used for further developments around the footwear and insole business.

THE SIMPLICITY

It's amazing how simple it is to use the Vandra 3D Scanner. The plug & play version includes an intuitive portable touchscreen tablet that is easy to use. The analysis process is done within a few seconds and can be discussed with the customer using the tablet for visuals. +

ANALYSIS SYSTEMS

3D SCANNER VANDRA

01-2300-110 | Size: D 67 x W 80 x H 32 cm

The Vandra 3D foot scanner delivers a three-dimensional image of both feet in seconds.

It provides a wealth of measurement data on instep height, ankle circumference, inner feet length and so on while also recommending sizes. The data can be used to find the right ski boots / sport shoes and insoles quickly. A high level of hygiene and comfort are guaranteed because customers can keep their own socks on while using the scanner, thus eliminating the need to remove their socks.

A permanent connection to the Internet via WLAN or LAN is necessary.

OPTIONAL ACCESSORIES

As an alternative to operate the Vandra 3D foot scanner

with the tablet, the Elotouch version opens up new possibilities for system presentation and operation.

INTRODUCTION-

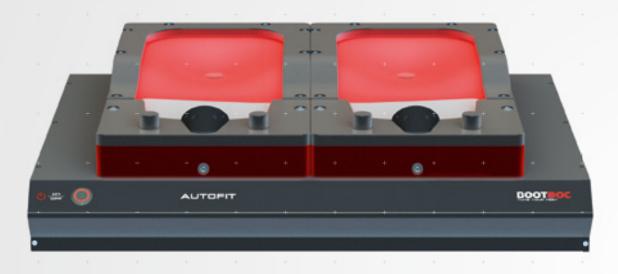

AUTOFIT BT THE FITTING SYSTEM FOR INSOLES.

Discover now: boot-doc.com/autofit

THE AUTOMATED FITTING SYSTEM FOR INSOLES.

The newly developed, patent-pending AUTOFIT system adapts insoles to the customer's foot shape automatically and in next to no time. All functions are easily controlled from a tablet or cell phone. The Fit Pods are electrically adjusted to the respective hip width and the preheated insoles are pressed against the foot using a special membrane and air pressure

FROM FORE FOOT TO HEEL.

To facilitate optimum positioning of the insoles in the Fit Pods, a vacuum is generated first. The fore foot covering is adjusted to the correct shoe size and the preheated insoles are inserted. The customer then places their feet on the insoles. Depending on their preference, this fitting can be done while sitting or standing. A laser helps to align the leg axis.

After switching the AUTOFIT from vacuum to air blowing, the membrane is pressed against the foot from the fore foot to the heel. The weight of the customer and the type of fitting can be defined. The preheated and thus flexible insole hardens in the exact shape formed by the foot with a partial weight bearing. The result is a perfect fit! The processing time can be adjusted precisely within a predefined time frame and optimized for the respective insole type. Errors in insole production are prevented thanks to the simple, quick, and automated procedure, and reproducible results are ensured. This technical innovation allows for the adaptation of STEP-IN, FUSION, and also 3D insoles.

The Fit Pods and the membrane can be easily replaced if required. AUTOFIT is offered as a stand-alone solution, but can also be integrated into the AUTOFIT⁺ CENTER BT. Along with hand holds, it is also equipped with a seat height adjustment, which can also be controlled via the tablet so that the customer can always maintain a 90° position to the Fit Pods for a seated fitting.

01-2300-157 | Size: D 55.5 cm x W 65.3 cm x H 15.7 cm

The AUTOFIT BT as a stand-alone solution with adjustable membrane for the customization of insoles.

- Automatic insole adjustment in compact design
- Electric hip width adjustment
- Laser-assisted leg axis alignment
- NEW: Control via app
- Tablet with installed app included

SILICONE AUTOFIT BT 01-2300-155 | 2 pcs. / units

CONTROL VIA APP

Open / Start the pre-installed app on the supplied tablet.

Adjusting body weight and Cooling time and whether seated or standing is adapted.

• Adjusting seat height and position the Fit Pods

 \cdot On / Off the laser function

 VAC
 PLANE
 COOLING TIME

 Image: Cooling time
 Image: Cooling timage: Cooling timage: Cooling time

Start of the process by creation of the vacuum; positioning of the Forefoot cover and insertion of the warm insert.

After positioning the feet on the preheated insoles, START of the Adjustment process by PUMP. During the fitting procedure the pressure as well as the cooling time can be changed.

COMBINATIONS

AUTOFIT CENTER BT

01-2300-158 | Size: D 115 cm x W 82 cm x H 85 cm

The AUTOFIT CENTER BT with integrated AUTOFIT BT boasts an ergonomic design and compact dimensions.

- · Modular, compact fitting center with small dimensions
- Electric, height-adjustable seat
- Height-adjustable and rotatable handles
- Retractable module for compact storage
- Flexible mounting attachment for the tablet with anti-theft device

* Autofit BT and Tablet not included

SHØ INDOOR SKI CENTER

SPORT I IN LØRENSKOG, NORWAY

The flagship store extends over 3 floors, one of which is devoted entirely to ski boots. The selection is huge, and the BOOTDOC devices provided in the bootfitting area include the Vandra 3D foot scanner for quick selection, a vacuum fitting system for insoles, and an Ultracam device for perfect ski boot adjustment. Shop Manager Pontus Flingdal: "The BOOTDOC devices give us every opportunity to fully adapt the products to the foot type. Our exacting requirements ensure that customers will remember a perfect day of indoor skiing."

THE BEST FRIEND OF A

BOB SKINNER'S SKI & SPORT IN NEWBURY, NEW HAMPSHIRE, USA

Since 1985 Frank MacConnell has been running Bob Skinner's Ski and Sport sports shop at the foot of Mount Sunapee in New Hampshire. He is a master bootfitter and former ski racer. Since the acquisition of Edgewise - Elite Ski Service in 2017, Bob Skinner's Ski & Sport also offers ski service for ski racing. Edgewise offered ski service the best Alpine ski racers for years, including the U.S. Ski Team. Frank has combined the highest quality boot fitting and top ski service under one roof.

To bolster his bootfitting efforts, Frank chose BOOTDOC's Vandra 3D scanner during a product demonstration at the Providence trade show in 2019. Even before his foot scan was completed – less than 15 seconds – he said: "I'll take the device!" While standing on the scanner, he imagined how the Vandra scanner would support him and his staff and raise their ski boot fitting to a higher level. After his first season, Frank MacConnell confirms that "the Vandra can do everything I imagined and fully meets all my expectations".

FITTING MATERIÅI

FITTING SYSTEMS

VAC IV ELECTRIC (110/230 V) 01-2300-140 | Size: D 59 x W 52.4 x H 15 cm

Electric Vacuum Casting System for molding custom insoles.

- · 2 separate, large silicon cushions with additional width-adjustment feature provide for perfect processing
- Speed regulator ensure optimum cushion firmness and air pressure
- High-quality silicon for longevity and excellent heat absorption
- · Anti-slip protection in cushion area

PILLOW VAC IV

01-2300-141 | Size: D 43 x W 22 x H 5 cm Robust, replacement cushions for the VAC IV electric.

CMT (CUSTOM MOLDING TOOL) 01-2300-095 | Size: D 55 x W 64.5 x H 8 cm

The CMT allows precise and simple customizing

of Step-In and 3D insoles, with no power supply needed. The casting is carried out by a special wax inside the chambers.

- Durable thanks to high-quality materials
- Easy to use
- Hip width can be adjusted manually (no tools needed)
- Molding can be carried out quickly and precisely
- · Pre-molded pillows for both the right and left foot

Q.

ULTRACAM UP BASIC (1 STRETCH + 1 ANKLE ARM) 01-2100-114

- · Separate controls for temperature and time
- Swiveling ankle stretch arm in order to be able to reach all areas in the ski boot
- Equipped with compressed air cooling to cool down ski boots in approx. 20 min.
- Three sets of milled ankle stretch forms
- Three pairs of lasts with various small adapters

ULTRACAM UP EXTRA STRETCH ARM

01-2100-115

- Second stretch arm for ULTRACAM UP BASIC
- Can be easily mounted on the basic device
- Equipped with compressed air cooling to cool down ski boots in approx. 20 min.

ULTRACAM STAR ANKLE ARM SINGLE, ELECTRIC 01-2100-116

- Swiveling ankle stretch arm in order to be able to reach all areas in the ski boot
- Separate controls for temperature and time
- Three sets of milled ankle stretch forms
- Equipped with compressed air cooling to cool down ski boots in approx. 20 min.

ULTRACAM STAR ANKLE SET DOUBLE, ELECTRIC 01-2100-119

- Can handle two ski boots simultaneously and independently from each other
- Swiveling ankle stretch arm in order to be able to reach all areas in the ski boot
- · Separate controls for temperature and time
- Three sets of milled ankle stretch forms for each arm
- Equipped with compressed air cooling to cool down ski boots in approx. 20 min.
- * Digital gauge not included

ULTRACAM STAR ANKLE ARM SINGLE (WITHOUT TIME AND TEMPERATURE CONTROL) 01-2100-118

• Swiveling ankle stretch arm in order to be able to reach all areas in the ski boot

• Three sets of milled ankle stretch forms

AIRCOOLING SET FOR ULTRACAM UP & STAR (FOUR-WAY)

01-2100-117

- Compressed air hose set for ULTRACAM UP and STAR devices
- Easy installation: Connect the air-cooling set with the respective ULTRACAM device and your compressed air generator, open the respective air valves and cool down the heated ski boots in approx. 20 min.

ULTRACAM STAR SET ANKLE STRETCH FORMS 3 + 3 (MILLED) 01-2100-120

- Milled ankle stretch parts with a smooth surface
- Includes two sets of round ankle parts in two sizes and a set with an elliptical shape

DIGITAL MEASURING GAUGE FOR ANKLE ARM 01-2100-121

• Can be mounted on all ULTRACAM STAR ankle stretch devices and ankle stretch arms of the ULTRACAM UP and helps to determine and track the deformation depth

ULTRACAM UP SET OF LASTS "CASUAL" WITH VARIOUS SMALL ADAPTERS 01-2100-132

WORK BENCH

55-125-200 | Size: D 52.5 \times W 80 \times H 90.5 cm | with wheels and drawers

The BOOTDOC ACADEMY program is a unique boot-fitting training program and offers every technician an introduction to, or advanced training in, boot fitting. Learn from top professionals and pick up tips and tricks that will enable you to provide your customers with the best footwear fitting service. Since the number of participants is limited, individual assistance is guaranteed during the seminar, and there is sufficient time to practice skills directly on the products.

Newcomers should choose the basic boot fitting seminar, while more experienced participants can register directly for the ADVANCED course.

- Bring your own ski boots or some old ones so that they can be ground and expanded.
- You will receive precise details of what the program involves, hotel options, the location and how to get there after you + have registered. Please send your registration to office@boot-doc.com.
- Every participant will receive a personal certificate and participation confirmation from the BOOTDOC BOOT, FITTING ACADEMY.

has participated at the BOOTDOC Account for BOOTDOC-Tuning-Portners Date

THE POWER FIT INDEX

The Power Fit Index (PFI) indicates how strong the overall level of gradual compression is: PFI 30 designates light compression, while PFI 90 is classified as strong and is therefore only found in our performance series.
