Endless possibilities.

Built for long, demanding days, the Freeride Series maximizes performance and protection to keep you pushing further.

FREERIDE SERIES

Top of the mountain, top of the podium.

Inspired by the demanding runs and high speeds of the FIS World Championships, the Alpine Series packs performance into every feature.

GOGGLES

ChromaPop™ 4D MAGTM

MAG™ series cod. M00732

You can now see more than ever before. The 4D MAG™ raises the bar for lens innovation with the introduction of *BirdsEye* Vision™. This state of the art lens technology has a 25% increase of overall field of view compared to the I/O MAG™. In addition we have evolved Smith MAG™ by integrating the dual locking mechanisms into the goggle frame outriggers to make a quick and easy lens change system. We know that with BirdsEye Vision™ featuring ChromaPop™ lens technology, you'll be able to see even more detail as you take on untracked territory.

VISION

The Smith I/O MAG™ combines the quick and secure Smith MAG™ interchangeable lens system with ChromaPop™ lens technology delivering you complete optical clarity. The MAG™ system blends the convenience of an interchangeable magnetic lens system with the security of a quick lock detachment. The I/O MAG™ includes two lenses—a bright light and a low light performance lens—with *ChromaPop*™ clarity and carbonic-X durability. Additional features include AirEvac™ ventilation for fog-free integration with Smith helmets, a revolutionary 5X[™] anti-fog inner lens treatment, and a Responsive Fit™ frame designed for a contoured face fit. The I/O MAG™ is your best companion for an epic day on the mountain.

NEW

Frontier

Airflow series cod. M00429

Make every day on the mountain a great one with the new Smith Frontier goggle. The Frontier delivers comprehensive eye protection and enhanced visibility in an affordable modern frame. You're ensured great vision whether it's sunny or snowing, thanks to the cylindrical dual lens with *Airflow* ventilation providing class 1 optical standards. The medium-fit Frontier is designed to fit a diverse range of profiles. Additional features include helmet compatibility, and an adjustable, no-slip silicone strap to ensure they stay put on the stormiest days.

Includes microfiber goggle bag

At long last, the new Smith Vogue delivers an attainable women's goggle with all the necessities in a modern classic design. These frames are designed to fit a woman's smaller face, with compression-molded foam creating a draft-free seal to keep out wind and moisture. A built-in Fog-X treatment absorbs and disperse any moisture that does find its way in to prevent fogging. The cylindrical dual lenses also feature Airflow ventilation to further prevent fogging and ensure a clear field of view from the top of the run all the way to the bottom. The Vogue is helmet compatible with a no-slip silicone backed strap, and available in an array of colors to coordinate with your look.

How ChromaPop[™] Works

WITHOUT CHROMAPOP™ WITH CHROMAPOP™

WHEN YOU SEE MORE, YOU CAN DO MORE.

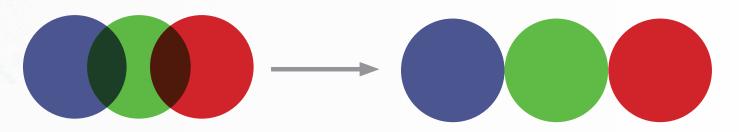

Charge harder, faster, and longer with the amplified detail and enhanced natural color of *ChromaPop™*. Through our proprietary *ChromaPop™* lens technology, we help you see detail and color beyond normal capabilities. *ChromaPop™* filters two specific wavelengths of light that cause color confusion. By doing this the lens delivers greater definition, more natural color, and unmatched clarity to allow you to see more detail.

NORMALLY

The eye's retina has trouble perceiving the difference between blue and green, and red and green light.

WITH CHROMAPOP™

ChromaPop™ filters these specific crossovers, allowing greater definition, natural color, and clarity.

natural color and enhances definition.

Which *ChromaPop*™ lens is right for you?

DO MORE WITH LESS.

ChromaPop™ Snow lenses do more work. With just one ChromaPop™ lens you experience enhanced definition and clarity across a greater range of conditions than with traditional lenses.

CHROMAPOP™ SUN

Perfect for cloudless, blazing light conditions, these lenses ease the harsh glare of high elevation sun while helping your eyes see more information in the terrain ahead of you.

CHROMAPOP™ EVERYDAY

Suited for a range of conditions, enhances every undulation of snow so you get more out of every moment.

CHROMAPOP™ STORM

Tuned to bring the most out of an environment when the storm moves in and the lights go out. Optimize contrast even on the worst days, so you can stay out longer.

VLT - VISUAL LIGHT TRANSMISSION

The VLT rating on Smith lenses shows how much light passes through them. The higher the VLT rating, the more light comes through that lens. Lower VLT rated lenses are good for bright, sunny days, whereas higher rated lenses are best in cloudy or low light situations

VLT: 100%

All light passes through

PHOTOCHROMIC

These lenses feature UV sensitive, self-tint-adjusting photochromic technology to bring you lenses that adapt to changing light conditions, so you always have the perfect tint for the amount of light.

Smith MAG™ proprietary technology enables you to quickly adapt to varying light conditions with the confidence of lens security. The next generation of Smith interchangeability has arrived.

DUAL LOCKING MECHANISMS

Once in position, the lens carrier provides a patent-pending dual locking mechanical engagement to secure the lens. With the Smith MAG's two locking mechanisms, the lens stays locked tight for whatever the hill throws at you. A simple push of one lever at either side of the lens releases the lens for easy swapping as the light and conditions change.

Adapt with $MAG^{\scriptscriptstyle\mathsf{TM}}$

CHANGE IS EASY.

MAG™ technology allows you to quickly adapt for any condition.

MAGNETIC CONTACT POINTS

Strong and weatherproof N52 magnets automatically guide the lens into the anchored position. The magnetic function speeds up lens changes to get you back out riding faster.

CONSIDERED DESIGN

Plastic grips are carefully considered and designed at the corners of the lens for easy interchangeability while protecting the surface of the lens.

Inner strength.

What really hurts is holding back. Koroyd® has you covered.

Smith innovation featuring Koroyd®

FINALLY, PROTECTION AS PROGRESSIVE AS YOU ARE.

Koroyd® provides superior impact absorption, design flexibility, and ventilation when compared to materials traditionally used in helmet construction. By utilizing crumple-zone cylinders that crush uniformly on impact, Koroyd® manages energy more efficiently with less volume than any other protection material on the market. behaves differently than traditional protection materials.

Unlike traditional protection materials, Koroyd® cylinders absorb and convert more kinetic energy, while increasing airflow and reducing overall weight. Not all helmets are created equal.

Developed as an energy absorber in the aerospace industry, cylindrical structures were found to be one of nature's strongest forms; a form that could offer the greatest impact absorbtion for a given length. Koroyd® utilizes cylinders to create a structure that Traditional materials act like a spring which stores energy and then releases it, Koroyd® is a true energy absorber which converts the kinetic energy by crumpling. This translates into better absorption of impact energy.

ENGINEERED ABSORPTION

The combination of Koroyd's® precise and unique thermal welding process leads to a structure with both extremely efficient and consistent energy absorption properties. Upon impact, the cores crush in a completely controlled manner, decelerating the energy from the impact and reducing the final trauma levels.

ENGINEERED PROTECTION

Thousands of co-polymer extruded tubes, thermally welded to create an unparalleled consistent and fully engineered core. Each Koroyd® section is engineered to precise durometer, size, and thickness specifications to provide the greatest impact resistance.

FULL BREATHABILITY

Koroyd® is an energy absorber which is fully breathable and doesn't compromise impact performance. Koroyd's® open cell construction allows cool air in, while expelling hot air from the rider's head. The completely open cell construction integrates with internal channels to create the full Aerocore™ construction to provide ventilated protection.

MIPS® technology

MULTI-DIRECTIONAL IMPACT PROTECTION SYSTEM

In a helmet with MIPS® Brain Protection System (BPS) the shell and the liner are separated by a Low Friction Layer. When a helmet with MIPS® Brain Protection System is subjected to an angled impact, the low friction layer allows the helmet to slide relative to the head. The MIPS® BPS is designed to add protection in helmets against the rotational motion. The rotational motion is a combination of rotational energy (angular velocity) and rotational forces (from angular acceleration) that both affects the brain and increases the risk for minor and severe brain injuries. MIPS® BPS has been scientifically proven to reduce rotational motion when implemented in a helmet by absorbing and redirecting rotational energies and forces transferred to the brain.

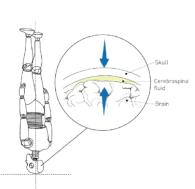

THE GREAT MISCONCEPTION

Accident statistics show that many injuries occur due to angled impact to the head. However, in standard helmet tests the helmet is dropped vertically onto a flat surface. The results are helpful for measuring precise vertical impacts, but inferior for measuring the more realistic scenario of an angled impact. *MIPS®* has been developed for reality and increases protection against angled impacts.

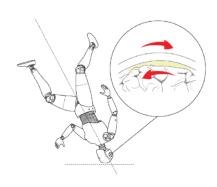

MIPS® IN ACTION

When you fall to the ground at an angle rotational forces are generated. A helmet integrating MIPS® technology creates a sliding layer between the outer shell and the head. This allows the helmet's outer shell to slide relative to the head when hitting the ground, so the rotational force is decreased, reducing the potential to damage your brain.

HOW HELMETS ARE TESTED TODAY

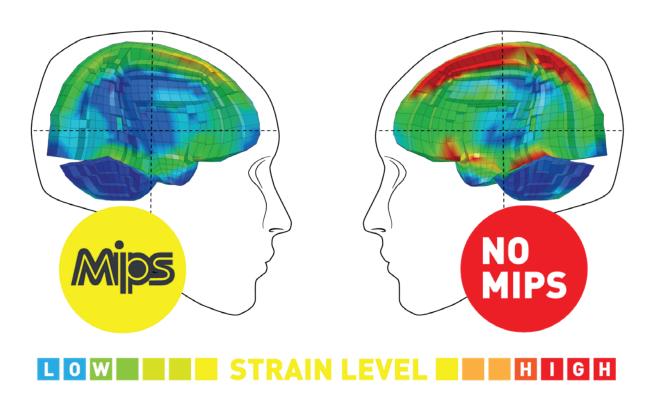

HOW YOU ARE MORE LIKELY TO FALL

STRAIN LEVELS

Simulated deformation of the brain from angled impact when the user is wearing a helmet with and without MIPS®.

Ultimate Integration

At Smith, we design helmets and goggles to work together as a fully integrated system. For the helmet line, the most important factor in integration is the $AirEvac^{TM}$ ventilation system. This is the bridge that allows goggles and helmets to function as one system, venting warm, moist air away from the goggles, through the helmet climate control system and ultimately away from the head.

INTEGRATION BEGINS WITH A PRECISE FIT

Ultimate integration starts with the precise fit of the Smith goggle and helmet. Our helmets are designed to match the curvature of the goggle frame, eliminating "gaper gap" and allowing precise alignment between the helmet *AirEvac*™ and the goggle venting systems.

AIREVAC: MAXIMUM AIRFLOW IS CRUCIAL

Goggles fog when standard helmets trap warm, moist air in the goggle chamber. Smith's AirEvac™ ventilation systems generate maximum airflow that pulls warm, fog-causing air out of the goggle. The warm air is allowed to exhaust out of the top of the goggle and begin its path through the helmet's AirEvac™ system.

REAR EXHAUST VENTILATION

The warm air that originally built up in the goggle has been forced out via the AirEvac™ ventilation system, has traveled through the AirEvac™ EPS vent channels, and is now being exhausted at the furthest distance possible from the goggle. Ultimate integration between goggle and helmet from start to finish.

How to choose the right goggle.

Ventilation and Construction

HYBRID SHELL CONSTRUCTION: Lightweight and low profile

Smith's hybrid shell construction combines separate lightweight and durable shells to create an entirely new helmet category. By fusing our tough bombshell ABS construction with flyweight inmold technology, our hybrid shell construction optimizes the favorable traits of each material in this revolutionary process. The result is a modern design that provides a lightweight, low profile, perfectly fitting helmet. hybrid shell construction also creates a clean, smooth top surface by enabling the low profile Regulator to function with reduced mass and volume.

IN-MOLD SHELL CONSTRUCTION: Lightweight and low profile

The performance standard for many years, in-mold construction creates a PC shell helmet with an EPS liner to maximize weight reduction. Lightweight, comfortable and offering value for every ounce, in-mold construction is the flyweight winner.

BOMBSHELL CONSTRUCTION: Tough for all-season use

Bombshell construction uses an injection molded ABS shell to withstand high-impacts and offer unparalleled durability, dent, and ding resistance. If you expect your helmet to be as tough as your truck, bombshell delivers.

IN-MOLD MATERIAL

BOMBSHELL MATERIAL

DUAL REGULATOR ADJUSTABLE VENTILATION

Temperature control is the most important feature when considering how to enjoy the entire day on the hill. Our Dual Regulator ventilation system independently controls the front and rear sections of the helmet's venting, allowing you to moderate your body temperature even in extremely cold conditions. By exhausting heat through the rear vents while maintaining a sealed front end, your body can effectively cool down if needed and avoid the dreaded "ice cream headache.'

SINGLE REGULATOR ADJUSTABLE VENTILATION

Adjustable, easy to use and extremely effective climate control, our low profile Regulator ventilation system allows you to modify the amount of airflow and heat exhaust even with a aloved hand.

AIRFLOW VENTILATION

Airflow ventilation utilizes strategically placed vents for easy climate control in all conditions. Vent placement maximizes airflow and heat exhaustion in warm temperatures while minimizing undesired cold air drafts. Fabric flaps in the lining design on certain models allow you to open and close the airflow vents for adjustable comfort.

Mountain Electronics

Music adds to the thrill of your mountain experience and sometimes, making the first powder day of the year means taking a work call on the lift. Either way, rely on Smith's audio program powered by *Aleck*™. From basic direct-line and bass-thumping audio to advanced iPhone® and Android® compatible features, we've got you covered.

DROP-IN AUDIO PROGRAM

By integrating universally compatible ear pads with super-thin, bass-thumping drivers, our Drop-In audio program for all adult helmets makes fumbling through lengthy instruction manuals a thing of the past. You are no longer bound to basic black helmets or forced to worry about which parts fit with which helmet.

Both the Aleck 006™ Wireless and Wired headphones are equipped with full range, 40mm drivers set solidly in the squircle shaped casing. This housing, coupled with a fully customizable audio EQ (via the Aleck GO!™ app), allows for epic in-helmet acoustics, creating the best Hi-Fi experience in the business. What's more, the Aleck GO!™ app for iOS® and Android® means your friends and family are just a tap away with our one-touch, walkie-talkie system. Lost a group member on the mountain? No problem. GPS gives you the peace of mind of knowing exactly where your friends and family are. All tested to work perfectly at -20°C/-4F, with IPX-4 sweat & water resistance.

Open up. Drop in. Rock out.

ALECK 006™ | WIRELESS cod, I701230AC0000

The Aleck 006™ Wireless is the universal helmet audio + walkie-talkie, preferred by Smith. Connect them to your Bluetooth® enabled device, drop them into your audio compatible helmet and enjoy 10 hours of continuous playtime. Loaded with full audio & volume controls, phone call capability, the power of voice command (Siri® & Google Assistant®) and a one-touch, push-to-talk walkie-talkie. Do it all while keeping your mittens where they belong ... waving in the air, like you just don't care. Imagine it: warm hands, fresh powder, total audio and communication control, and no wires inside your jacket. No more fear of dropping your phone off a lift.

ALECK 006™ | WIRED cod. 1701220AC0000

The Aleck 006™ Wired is also loaded with a glove-friendly, on-device button for audio control. Siri® & Google Assistant® provide for volume control and a built-in microphone means you can answer your next call without removing your helmet or your gloves. The Aleck 006™ Wired effortlessly provides unsurpassed, helmet-filling music from your audio device. It's everything you need to have a great time on the hill.

Cross Merchandising

GOGGLE AND HELMET MODELS/COLORWAYS

MISSION

Smith goggles and helmets are designed with the integration of style in mind. Properly merchandising Smith helmets and goggles to show this relationship will draw customers to your Smith wall like moths to a lamp. Below are a few examples of how to help your presentation and tell the Smith product line color and graphic stories so your patrons get the most out of their shopping experience. These are just a few ideas to get you started, so be creative and maximize your opportunities with your Smith Optics program.
