

A high-angle photograph of a mountain landscape. In the foreground, a paved road curves through a rocky, sparsely vegetated area. A small, dark-colored cyclist is riding along the road. The middle ground is dominated by a dense forest of trees with vibrant autumn foliage in shades of orange, yellow, and green. The background features steep, rugged mountains with light-colored rock faces and patches of snow or light-colored rock. The sky is a clear, pale blue.

SMITH

Bike 2020

A full-page background image of a mountain landscape. In the foreground, a paved road with white dashed lines curves through a dry, grassy hillside. A small green car is visible on the road. To the right of the road is a large, calm lake with a striking turquoise color. In the background, a range of rugged mountains with significant snow cover rises against a clear, bright blue sky. The overall scene conveys a sense of adventure and natural beauty.

Pursue your thrill.

WE ARE FOR THE RIDERS, THE TWO-WHEELERS,
AND ALL THAT THEY PURSUE.

Vision + Protection

EYEWEAR AND HELMETS DESIGNED
TO FUNCTION TOGETHER
AS THE ULTIMATE SYSTEM.

EXPERIENCE **CHROMAPOP™**

When you see more, you can do more. Charge harder, faster, and longer with the amplified detail and enhanced natural color of **ChromaPop™** lens innovation.

DEMAND SMITH WITH **KOROYD®**

Finally, protection as progressive as you are.

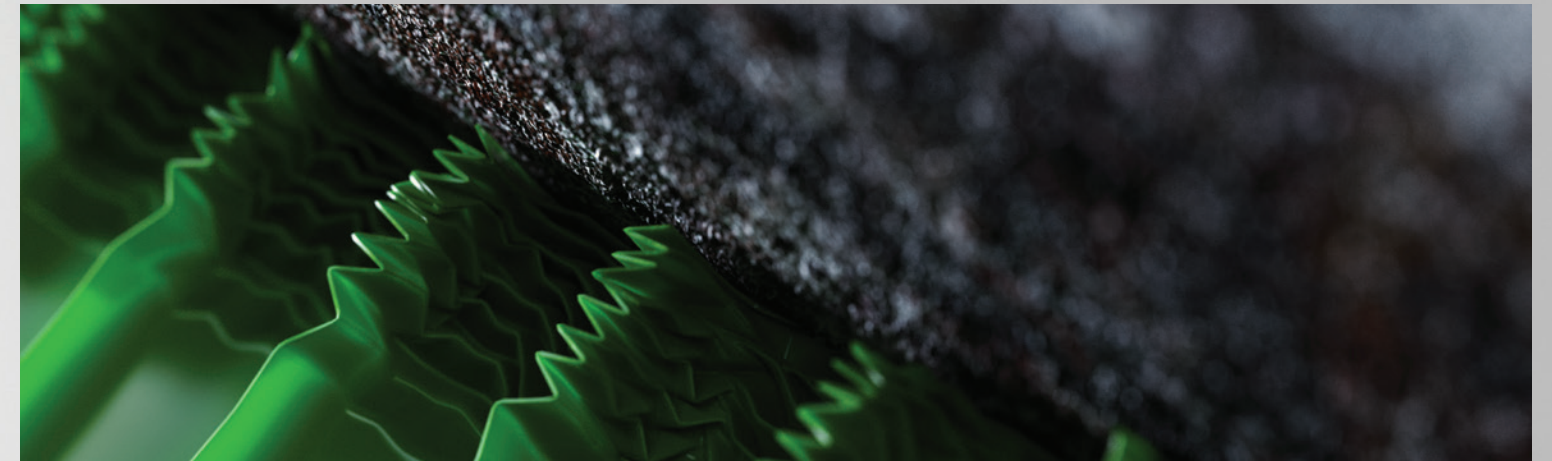

Koroyd® crumple-zone cylinders crush uniformly on impact, converting and absorbing more kinetic energy than traditional protection materials. Not all helmets are created equal.

Damage Control

Not all helmets are created equal.

Demand Smith with **Koroyd®**

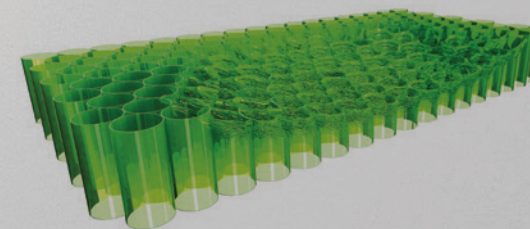

Smith innovation featuring Koroyd®

FINALLY, PROTECTION AS PROGRESSIVE AS YOU ARE.

Koroyd® provides superior impact absorption, design flexibility, and ventilation when compared to materials traditionally used in helmet construction. By utilizing crumple-zone cylinders that crush uniformly on impact, Koroyd® manages energy more efficiently with less volume than any other protection material on the market.

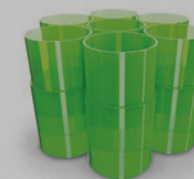

Unlike traditional protection materials, Koroyd® cylinders absorb and convert more kinetic energy, while increasing air flow and reducing overall weight. Not all helmets are created equal.

Developed as an energy absorber in the aerospace industry, cylindrical structures were found to be one of nature's strongest forms; a form that could offer the greatest impact absorption for a given length. Koroyd® utilizes cylinders to create a structure that behaves differently than traditional protection materials. Traditional materials act like a spring which stores energy and then releases it, Koroyd® is a true energy absorber which converts the kinetic energy by crumpling. This translates into better absorption of impact energy.

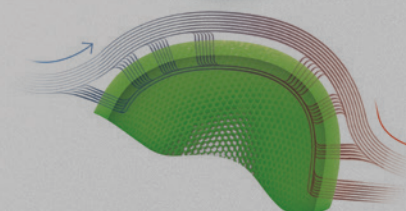

ENGINEERED ABSORPTION

The combination of Koroyd's® precise and unique thermal welding process leads to a structure with both extremely efficient and consistent energy absorption properties. Upon impact, the cores crush in a completely controlled manner, decelerating the energy from the impact and reducing the final trauma levels.

ENGINEERED PROTECTION

Thousands of co-polymer extruded tubes, thermally welded to create an unparalleled consistent and fully engineered core. Each Koroyd® section is engineered to precise durometer, size, and thickness specifications to provide the greatest impact resistance.

FULL BREATHABILITY

Koroyd® is an energy absorber which is fully breathable and doesn't compromise impact performance. Koroyd's® open cell construction allows cool air in, while expelling hot air from the rider's head. The completely open cell construction integrates with internal channels to create the full Aerocore™ construction to provide ventilated protection.

Amplify Awesome

WHEN YOU SEE MORE, YOU CAN DO MORE.

Experience **ChromaPop™**

How ChromaPop™ works

WHEN YOU SEE MORE, YOU CAN DO MORE.

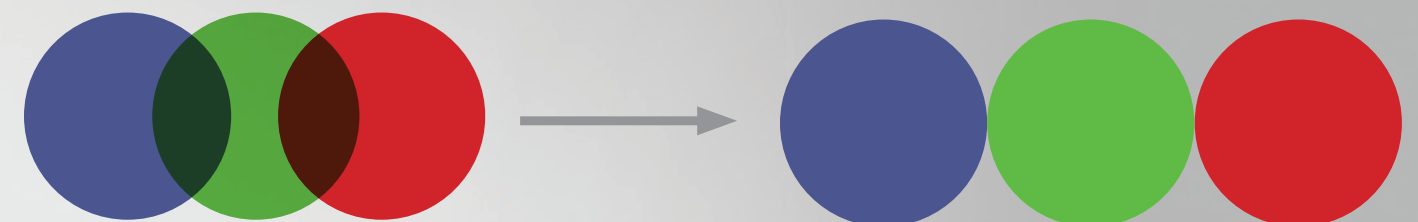

Charge harder, faster, and longer with the amplified detail and enhanced natural color of *ChromaPop™*. Through our proprietary *ChromaPop™* lens technology, we help you see detail and color beyond normal capabilities. *ChromaPop™* filters two specific wavelengths of light that cause color confusion. By doing this the lens delivers greater definition, more natural color, and unmatched clarity to allow you to see more detail.

NORMALLY

The eye's retina has trouble perceiving the difference between blue and green, and red and green light.

WITH CHROMAPOP™

ChromaPop™ filters these specific crossovers, allowing greater definition, natural color, and clarity.

Trace

Performance road helmet with **Aerocore™** construction featuring **Koroyd®**
cod. E00728

The Trace is the pinnacle helmet in Smith's performance road collection. The Trace features *Koroyd®*, which fully surrounds the helmet providing exceptional protection and works with the internal air channels and open intake and exhaust ports to produce maximum ventilation. Storage and ventilation of eyewear is crucial on those long rides; the Trace's *AirEvac™* system relieves hot air that builds up on your eyewear to prevent fogging. Eyewear storage is made easy by channels on the side of the helmet that hold your eyewear in place for those grueling climbs.

Speed with Benefits

SUPERIOR AERODYNAMICS, IMPROVED PROTECTION, AND ULTIMATE VENTILATION

The most complete helmet on the market.

AERODYNAMIC WIND TUNNEL DATA

No one questions wind tunnel data and we are not about to start. However, the science does require expertise. Through a partnership with the University of Washington wind tunnel and world-renowned aerodynamicist Len Brownlie, we tested the Ignite and Trace helmets against the current best-in-class helmets using the Wind Averaged Drag (WAD) methodology. This methodology was developed for the automobile industry decades ago but at Brownlie’s direction, has been modified for cycling-specific tests.

To make it as simple as possible for athletes and consumers to understand, the WAD method aggregates the drag measurements from several discrete yaw angles into a single “wind averaged” measure of drag. This provides final estimated time savings for 40k and 180k time trials.

	HELMET MODEL	WIND AVERAGED DRAG @ 30 MPH (G)	TIME DIFFERENCE			
			40KM TT @ 200W (25MPH)	40KM TT @ 400W (32.2MPH)	180KM @ 250W (27MPH)	
AERO ROAD	SMITH Ignite	478	-13 sec	-17 sec	-77 sec	FASTER
	Evade II	480	-12 sec	-17 sec	-74 sec	
	Vanquish (no visor)	484	-11 sec	-15 sec	-67 sec	
	SMITH Podium (w/ visor)	491	-8 sec	-13 sec	-54 sec	
	Protone	519	-1 sec	-1 sec	-5 sec	
ALL-AROUND	SMITH Trace	522	0 (baseline)	0 (baseline)	0 (baseline)	SLOWER
	Synthe	540	+5 sec	+7 sec	+31 sec	
	Prevail II	540	+5 sec	+7 sec	+31 sec	
	SMITH Overtake	552	+9 sec	+12 sec	+52 sec	

RESULTS

Whether you’re talented enough to hold a pro tour speed of 32 mph for 40K, or if 25mph for 40K is more in reach, you’ll appreciate the best in class aerodynamics of the Ignite and Trace. Regardless of pace, all riders will benefit from the progressive protection of Koroyd® and the secure eyewear integration.

Wind averaged bike axis drag calculated using average of multiple runs and wind speed velocity sweep through four yaw angles. At 25mph and 0 yaw, 95% confidence interval is +/- 5.5g. All data collected at University of Washington Kirsten Wind Tunnel over the course of a single day under similar environmental conditions. Helmets were installed on the headform using consistent brow position, strap, and fit system adjustment. Rider head angle was also maintained. Time savings calculated for a 160lb (72.5kg) rider, including all clothing, and a 17lb (7.7kg) bike at sea level with 0 grade and no wind.

Podium TT

Superior aerodynamic time trial helmet featuring **Aerocore™** construction and **ChromaPop™** vision
cod. E00716

Maximize your speed, vision, and protection with the Podium TT. Using Smith's proven Aerocore™ construction featuring Koroyd®, we combine best in class protection with a streamlined aerodynamic efficient design to cut out the weight and improve overall ventilation with this time trial helmet. With special attention to a rider's overall performance, the VaporFit™ adjustable system gives you the precise fit you need, while the oversized exhaust vents provide maximum ventilation without the added drag. While out on course, see more detail with the integrated Podium TT Optical Shield featuring our award-winning ChromaPop™ lens technology. Have the confidence to go harder and faster than ever before when every second counts.

Smith's first unapologetic mountain bike goggle, the Squad MTB provides you with crystal-clear vision, maximum ventilation, precise fit and excellent helmet integration. The Squad MTB comes with a *ChromaPop™* lens installed and an anti-fog coated, clear bonus lens. Select colors are available with an anti-fog coated, clear lens only. Both cylindrical, ultra-durable carbonic-x lenses are massive for a large field of view.

NEW

Attack MTB MAG™

cod. 202299

The trail ready Attack MTB MAG™ features Smith's MAG™ lens interchange system that enables you to quickly swap between the included bright-light and low-light *ChromaPop™* lenses, improving visibility on the trail regardless of light conditions. For fog-free vision, the Attack MTB MAG™ features a ventilation channel in the brow of the larger, maximum coverage lens. These details, combined with the secure fit of a two-position, hydrophilic nose pad and megol temples, make it the most complete trail riding eyewear piece in our collection.

Attack & MAG™ technology

CHANGE IS EASY WITH THE SMITH MAG™ QUICK RELEASE LENS CHANGE SYSTEM

The next generation of Smith performance eyewear has arrived. The aerodynamically designed Attack MAG™ and Attack Max MAG™ are faster in every detail. With a simple click, experience the sound of speed with Smith MAG™ interchangeable technology; an innovation that enables fast *ChromaPop™* lens swapping for varying light conditions.

MECHANISM

Two opposing N52 neodymium magnets, with the highest attraction to size ratio, in the injection molded temple lug intuitively separate to allow the temple to slide on to the lens carrier providing a locking mechanical engagement that resists forces and rotation during over-extension and reduces optical stress on the lens.

EXPANDED FIELD OF VIEW

When you see more, you can do more. With an expansive field of view and uninterrupted sightlines even in an aggressive riding position; the Attack MAG™ and Attack Max MAG™ lenses provide unrivaled levels of protection from sunlight, wind, and debris.

CHROMAPOP™ PERFORMANCE

Whether on the trail or on the road, our proprietary lens technology helps you see detail and color beyond normal capabilities. *ChromaPop™* filters specific wavelengths that cause color confusion and delivers greater definition, more natural color, and unmatched clarity via an installed Sun tint for bright conditions and an included Contrast tint for low light conditions.

NARROW FIT

WIDE FIT

TWO-POSITION ADJUSTABLE NOSE PADS

Upgraded two-position adjustable nose pads enables you to customize the comfort and fit based on the shape of your nose bridge. This also allows you to strategically position Attack MAG™ and Attack Max MAG™ further from your brow to maximize ventilation and help prevent lens fogging during varying efforts and conditions.

INVISIBLE FIT

With a frameless, lightweight (29.2g Attack MAG™ and 31.6 g Attack Max MAG™) wrap-around design, Attack MAG™ and Attack Max MAG™ disappear on the rider's face while maximizing ventilation and integration with Smith cycling helmets. Expanded hydrophilic megol temples and upgraded two-position nose pads provide a secure comfortable fit.

MIPS® technology

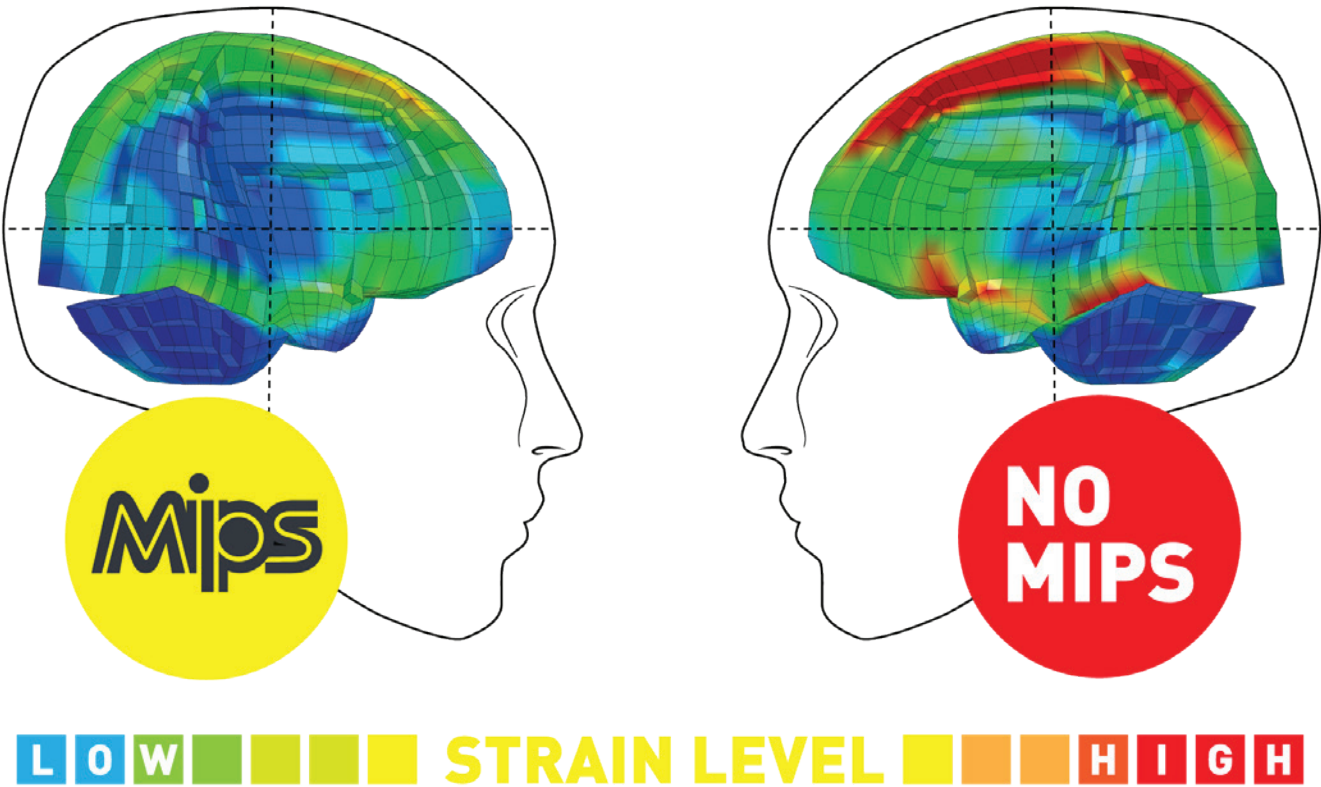

Multi-directional impact protection system

MIPS® is used to reduce the rotational forces to the brain in the case of an oblique impact. Smith helmets are created to absorb direct impacts very efficiently and when combined with MIPS®, Smith helmets absorb oblique forces better by allowing a small rotation of the outer shell relative to the liner.

MIPS® IN ACTION

When you fall to the ground at an angle rotational forces are generated. A helmet integrating MIPS® technology creates a sliding layer between the outer shell and the head. This allows the helmet's outer shell to slide relative to the head when hitting the ground, so the rotational force is decreased, reducing the potential to damage your brain.

STRAIN LEVELS

Simulated deformation of the brain from angled impact when the user is wearing a helmet with and without MIPS®.

Customize your fit

Smith fit systems

VAPORFIT™

Crafted with ease-of-use and superior comfort in mind, the VaporFit™ system relies on a tried-and-true rotary dial adjustment system integrated with a tuned elastic fit using engineered shapes. Each VaporFit™ system has a full 5cm of rotary adjustability. Additionally, the system can be moved up/down or forward/backward at the attachment points. The final result is increased comfort with a personalized, secure fit.

Available in the Forefront 2, Session, Rover, Venture, Ignite, Trace, Podium TT, Network, Route, and Portal.

LIFESTYLE FIT SYSTEM (LFS)

Built around the forgiving properties of elastic, the self-adjusting Lifestyle Fit System is designed to flex around the rider's head, providing a dynamic fit that will move as you do. Additional lateral adjustability on the fit system arms allows it to accommodate a wide range of head sizes. With the Lifestyle Fit System, you'll experience comfort and mobility from a fit system that you'll never have to think about.

Available in the Maze.
